Addressed Mail Only Thank You label

Online key replacement service www.boxdesign.co.nz

Optional padlock receptive lock for parcel drop

Complete lock and door replacement service

For the best results we recommend using a qualified builder or professional installer.

Installation

The polyethylene Masonry Insert is injection moulded to a fixed-depth to create a water-tight unit.

This unit is installed within your column / brick / stonework leaving the door end accessible. Create a small alcove or recess for the door access if your wall is deeper than the 390mm Masonry Insert.

50mm numbers fit neatly on the faceplate, or position larger feature numbers below the stainless steel or black. The self-adhesive on the numbers can be assisted with additional adhesive when applied to a textured surface.

Cleaning and Care

We recommend cleaning your letterbox regularly with warm soapy water.

To remove any stubborn marks, use a soft cloth and methylated spirits.

If the lock is left unused for some time, spray a lubricant like WD40 or CRC down the lock barrel, then push your letterbox key in and out of the lock several times.
